

Derivative Master Class

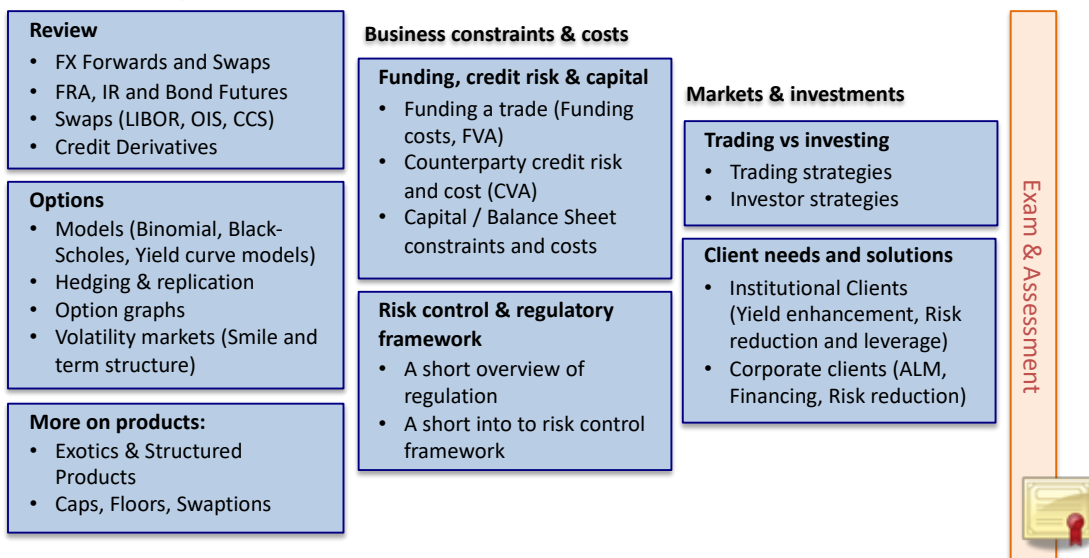

How the derivatives market really works

Description

The Nosco Derivative Master Program is based on insights from the trading floors of large derivative houses. The course combines academic rigour, market knowledge and reflects the newest developments in finance. The course is aimed at participants looking for in-depth understanding of derivatives and volatility markets as encountered in the real business world. The content was refined over many years and applied to train thousands of investors, traders, risk managers, structures and marketers.

Course participants will learn how products are used in the different markets and by various clients, how they are risk managed by banks, modelled and priced in the academic world and in real life. Much emphasis is put on the trading relationships between products and how the constraints of today's banking environment influence product design and pricing. Challenging homework assignments and a final exam complement the class.

Product knowledge

Duration

The program can be tailored to the needs of the participants and run as a 5-day or as a more comprehensive 10-day course.

NoscoPartners

The Nosco Partners are all banking professionals with a strong academic background and extensive education experience. They worked for many years on the business and education side of large trading firms where client focus and practical relevance is key. Before founding Nosco, the partners successively shaped the financial education departments at O'Connor & Associates, Swiss Bank Corporation and UBS Investment Bank. NoscoPartners is passionate to cultivate and refine this practical approach to education.
